Subject: OPP glyphosate update

Hi all:

Just an update of where OPP is heading in relationship to their ongoing work on glyphosate – in case you didn't know!

First of all, you may have seen the news about the final CARC going live inadvertently and OPP pulling it from the web. Here are some links in case you missed it.

Advocates Fault EPA Review Finding Glyphosate Unlikely To Cause Cancer

Environmentalists are faulting an EPA assessment finding the world's most commonly-used herbicide is not likely to cause human cancers, arguing the agency relied on industry studies and unrealistic assumptions, and also appears to lack confidence in its own review, given that EPA posted the document to a public site and then withdrew it days later.

EPA Panel Finds Glyphosate Not Likely to Cause Cancer

Glyphosate, a weed killer developed by Monsanto that is now the most widely used pesticide in the U.S., likely does not cause cancer, according to an EPA report. The report's findings disagree with a 2015 review of glyphosate by the World Health Organization's International Agency for Research on Cancer, which found that the pesticide is a "probable carcinogen."

Report touting glyphosate safety published by mistake -- EPA

U.S. EPA yesterday posted online and then removed a report suggesting glyphosate is unlikely to pose a cancer risk to humans.

An immediate issue is their ongoing work with glyphosate and a request for epi help.

To update you in case you don't know:

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

That's the latest intel! More to come.
